## Ethanol's Economic Impact

- ❖ **Growth in ethanol production has:**
  - Enhanced the value of agriculture products
  - Stimulated investment in new technologies
  - Expanded economic opportunities for America's corn growers

## Impact on Agriculture

- ❖ **2006-2015 has been the greatest wealth build in the history of U.S. agriculture**
  - Value of U.S. crops hit \$194 billion in 2014, down slightly from the past three years, but still the fourth-highest ever
  - Value of livestock hit a record \$209 billion in 2014
  - Farm equity and the value of farm assets both hit new records in 2014
- ❖ **Ethanol has helped transform the once-stagnating grain sector into an economically vibrant and demand-driven marketplace**
- ❖ **From 1997 to 2006, corn prices were below the cost of production and farmers were reliant on government payments to offset losses**
- ❖ **Corn prices in many areas fell close to—or below—cost of production in 2014, as EPA's proposal to slash the RFS constrained demand for the 2014 record crop**
